## Present and future of dental implant treatment

Chair: **Assoc. Prof. Fumihiko YOKOTA** (Research Promotion Coordinator of Q-AOS)Professor **Yasunori AYUKAWA**

Division of Oral Rehabilitation, Faculty of Dental Science, Kyushu University

Hello! My name is Yasunori Ayukawa, 53 years old. I was born in Kitakyushu City, northernmost part of Kyushu. I graduated from Kyushu University School of Dentistry in 1993 and Graduate School of Dental Science in 1998. Since 2017 I was an associate professor of Kyushu University Faculty of Dental Science and since 2021 I am a professor. My major is prosthetic dentistry and dental implantology. As a researcher, I have been studying about the tissue compatibility of dental implant. I am also serving as a dentist in Kyushu University Hospital 5 days a week and struggling to improve the masticatory function of patients.

What kind of image do you have of dental implant treatment? Many people have negative images such as painful, scary, expensive, and not long-lasting. In this lecture, I would like to introduce what implant treatment is and talk about the advantages and disadvantages of this treatment. I will also show you the state-of-the-art treatment we provide at Kyushu University Hospital. Nowadays, teeth can be made without having impression. In addition, I would like everyone to see the results of our research, which will serve as the foundation for future implant treatment.
